Education

- **Polaris School Of Technology** — Bengaluru, India
  Artificial Intelligence and Machine Learning; GPA: 7.8 — *Aug. 2024 – June. 2028*
- **Vidya Mandir IND PU** — Bengaluru, India
  Physics,Chemistry,Mathematics,Computer; Percentage: 90.5 — *July. 2022 – May. 2024*

Experience

- **AutoMeta.ai** — March 2026 – June 2026
  Founding Tech Intern
  - **AI Automation & Data Pipelines**: Developed n8n workflows for web scraping, data ingestion, and AI-driven workflow orchestration using OpenClaw.
  - **Analytics & Anomaly Detection**: Contributed to backend APIs, database architecture, anomaly detection, and automated workflows for data-driven system monitoring.
  - **Dashboards & Monitoring**: Built React.js dashboards to monitor system logs, agent performance, and workflow execution.
- **IndiaWantsToKnow (IWTK)** — June 2026 – July 2026
  AI Automation Intern
  - **Generative AI & LLMs**: Developed LLM-powered workflows for automated research, quiz generation, and structured content processing.
  - **AI Agent Development**: Built a LinkedIn content agent for news discovery, filtering, content generation, and Telegram-based approval workflows.
  - **Data Processing**: Automated web scraping, deduplication, data filtering, and structured data storage using n8n.

Projects

- **RetentionBrain – Customer Churn Prediction**: *Tech: Python, Pandas, NumPy, Scikit-learn, XGBoost, SHAP, Matplotlib, Seaborn*
  Performed exploratory data analysis (EDA) and RFM-based feature engineering on customer transaction data to identify churn patterns. Developed and evaluated Logistic Regression and XGBoost classifiers using ROC-AUC and model evaluation metrics. Applied SHAP-based feature analysis to interpret predictions and identify key behavioral indicators associated with customer churn.
- **Wholesale Customer Segmentation**: *Tech: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn*
  Processed and analyzed wholesale purchasing data through data cleaning, exploratory analysis, and feature scaling. Implemented K-Means clustering and evaluated cluster quality using the Elbow Method and Silhouette Score to identify distinct customer segments.
- **FlowSync – Enterprise Data Integration Platform**: *Tech: Next.js, Node.js, TypeScript, PostgreSQL, Redis, BullMQ, Docker*
  Built a distributed data integration platform connecting REST APIs, FHIR healthcare systems, and messaging services. Implemented asynchronous data processing, fault-tolerant background workers, retry strategies, and idempotency guarantees using Redis, BullMQ, and PostgreSQL. Integrated automated testing and CI/CD workflows for reliable deployment.

Achievements

- **1st Place – Innovate4Impact, E-Summit '26**: Secured first place in the Bangalore Zonal competition at Indraprastha Institute of Information Technology, Delhi, with an innovative technology solution.
- **3rd Place – PolarisGP**: Designed, built, and tested a high-performance Tarmo5 RC car as part of a competitive engineering program.
- **Google Cloud Arcade Facilitator**: Selected for the facilitator program; earned Google Cloud Computing Foundations and Implement Load Balancing on Compute Engine skill badges.
- **Bharatiya Antariksh Hackathon 2026**: Participated in the ISRO-organized hackathon focused on space technology and innovation.
