PROFESSIONAL SUMMARY

Computer Science student specializing in Artificial Intelligence and Machine Learning, Full-Stack Development, and Data Systems, with experience in building scalable dashboards and real-time data pipelines. Skilled in developing ML models for anomaly detection, predictive analytics, and performance optimization. Proficient in React, Node.js, and Python, with hands-on experience in deploying cloud-based applications and monitoring systems. Strong interest in robotics, IoT-driven systems, and building production-grade AI solutions.

EDUCATION

Bachelor of Technology (B.Tech CSE) 2024 - 2028
Polaris School of Technology , Bengaluru Grade: 7.8

Intermediate (Class XII) 2022 - 2024
Vidya Mandir IND PU, Bengaluru Grade: 90.5%

Matriculation (Class X) 2021 - 2022
Sri Vani High School, Bengaluru Grade: 98.7%

EXPERIENCE

Founding Tech Intern

AutoMeta.ai March/2026 - June/2026

- Designed and deployed scalable full-stack applications using **React.js and JavaScript** for analytics and monitoring platforms
- Built **real-time dashboards** to track system logs, agent performance, and workflow execution metrics
- Developed and managed **agentic infrastructure (OpenClaw)** for automating AI-driven workflows and system orchestration
- Built **data pipelines using n8n** for automated web scraping, preprocessing, and real-time data ingestion
- Contributed to backend architecture, APIs, and database systems supporting **high-throughput and real-time processing**
- Applied **data-driven techniques to detect anomalies in workflow execution and system performance**
- Implementing **automated SEO optimization workflows** using structured data pipelines

Ai Automation Intern

IndiaWantsToKnow(IWTK) June/2026 - June/2026

- Built an AI-powered quiz generation pipeline for IWTK, **automating research** and question generation and structured output workflows
- Developed n8n and LLM-powered workflows for **automated content processing** and quiz generation
- Built a LinkedIn **content agent** for news discovery, filtering, content generation, and Telegram-based approvals
- Designed automated pipelines for web scraping, deduplication, filtering, and structured data storage

PROJECTS

FlowSync – Enterprise Data Integration & Automation Platform (Tech Used - Next.js, Node.js, TypeScript, Express.js, PostgreSQL, Redis, BullMQ, Docker, Prisma ORM)

- Built a distributed data integration platform that synchronizes REST APIs, FHIR healthcare systems, and messaging services through an asynchronous connector architecture.
- Developed an event-driven processing pipeline using BullMQ, Redis, and PostgreSQL with idempotency guarantees, retry strategies, and fault-tolerant background workers.
- Containerized and tested the full-stack application with Docker, Prisma ORM, GitHub Actions, and automated unit/integration test suites for production-ready deployment.

RetentionBrain – Customer Churn Prediction (Tech Used – Python, Pandas, Scikit-learn, XGBoost, Matplotlib, Seaborn)

- Performed in-depth exploratory data analysis on customer behavior and subscription patterns to identify key churn indicators
- Built and optimized machine learning models including Logistic Regression and XGBoost to predict customer churn with strong ROC-AUC performance
- Engineered relevant features such as tenure, usage patterns, and customer demographics to improve predictive accuracy

Wholesale Customer Segmentation (Tech Used – Python, Pandas, Scikit-learn, Matplotlib, Seaborn)

- Performed exploratory data analysis on wholesale customer spending patterns to identify purchasing behavior across product

categories
- Applied K-Means clustering with proper feature scaling and validated clusters using Elbow Method and Silhouette Score
- Segmented customers into distinct groups to enable targeted marketing strategies and data-driven business decisions

EatRight.AI – Smart Nutrition Analysis System (Tech Used – Python, Pandas, Machine Learning, NLP, API Integration)

- Developed an AI-powered system to analyze food consumption patterns and provide personalized dietary insights
- Processed nutritional data and user inputs to recommend healthier food alternatives based on calorie and nutrient profiles
- Integrated machine learning models to classify food items and generate intelligent recommendations, Focused on promoting healthier lifestyle choices through data-driven insights and automated nutrition guidance

SKILLS

Languages: Python, JavaScript, TypeScript, C++, Java
Web & Frameworks: React.js, Next.js, Node.js, Express.js, Tailwind CSS
Machine Learning: Scikit-learn, XGBoost, NLP, Feature Engineering, Model Evaluation, Classification & Regression, TensorFlow (basic)
Data & Visualization: Pandas, Matplotlib, Seaborn
Cloud & DevOps: GCP, AWS (EC2, S3 – basic), Firebase, Supabase, Git, GitHub
Databases: MongoDB, MariaDB, PostgreSQL
Other: REST APIs, Real-time Data Pipelines, Dashboard Development, System Design, LLM APIs

ACHIEVEMENTS

1st Place at Innovate4Impact – Bangalore Zonal | E-Summit'26, Indraprastha Institute of Information Technology, Delhi, competing against top student teams with an innovative tech solution March 2026

Secured 3rd place in the PolarisGP race by designing, building, and testing a high-performance Tarmo5 RC car as part of a competitive engineering program. May 2026

Participant, Bharatiya Antariksh Hackathon 2026 - Indian Space Research Organisation (ISRO) June 2026
